

Operational UTI Status Between Adjacent Selected Episodes

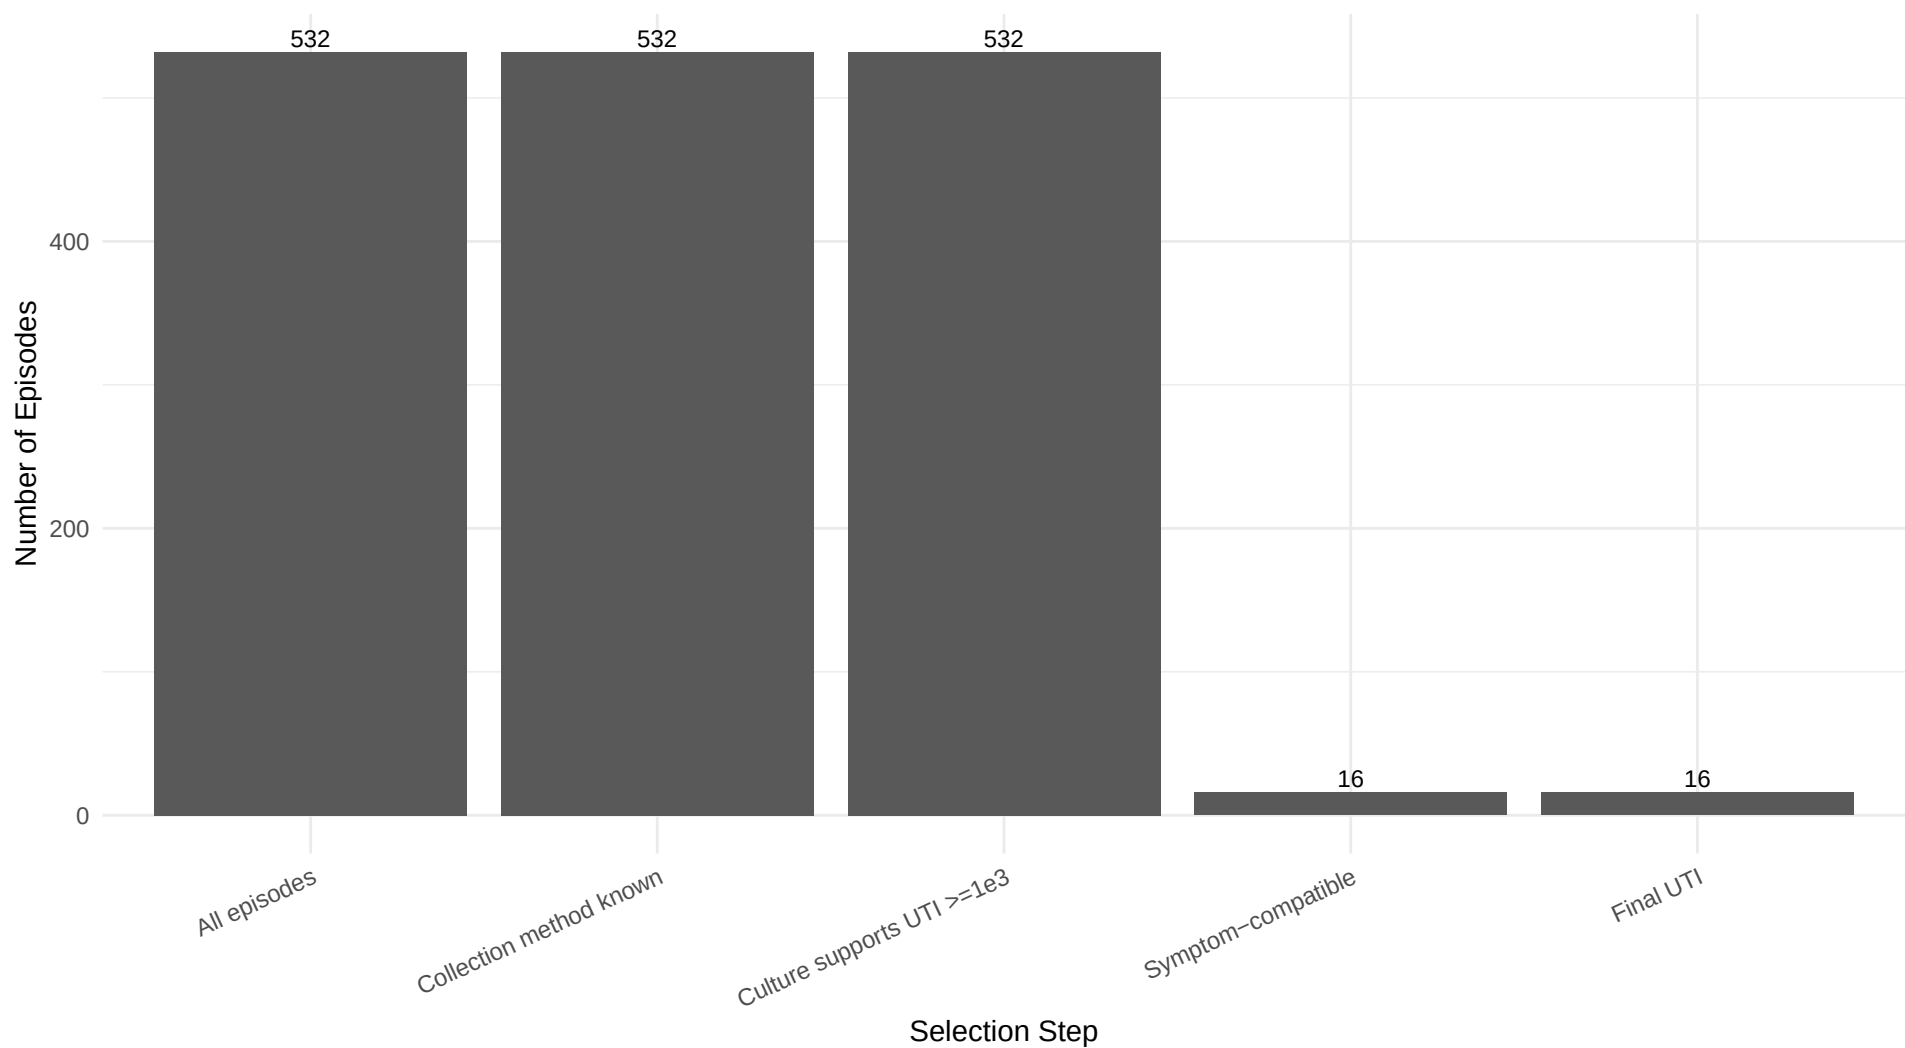

Assembly Quality Distribution by Primary UTI Status

Catheter-Aware UTI Case Definition in the Selected Longcycler Cohort

Culture support uses the primary $\geq 10^3$ CFU/mL threshold where CFU is available

Source Status Reclassified in the Selected Longcyclor Cohort

Primary status is UTI vs Not_UTI; Not_UTI subgroups are descriptive

Primary UTI or Not_UTI subgroup

UTI

bacteriuria_not_UTI

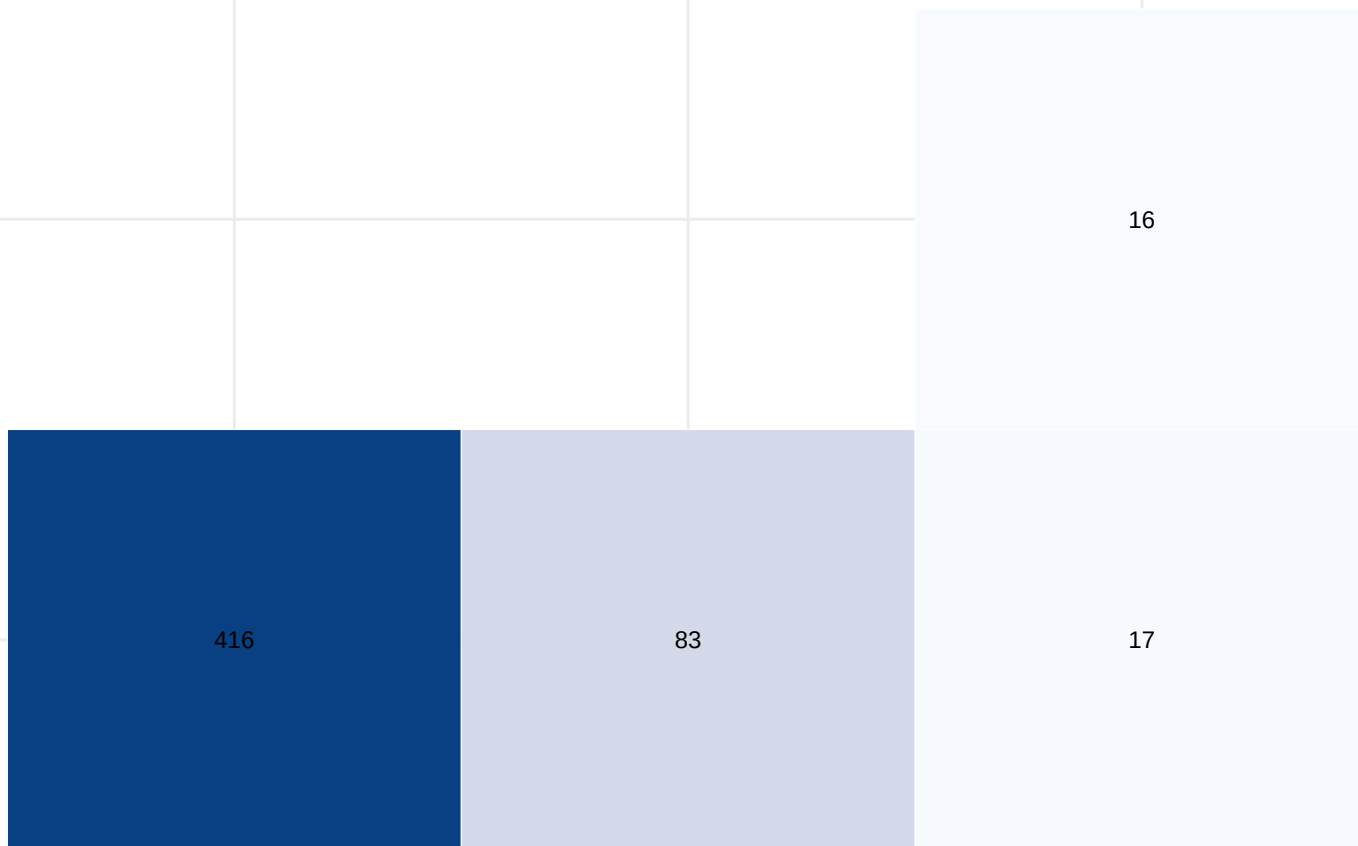

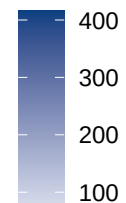

ASB

Negative

UTI

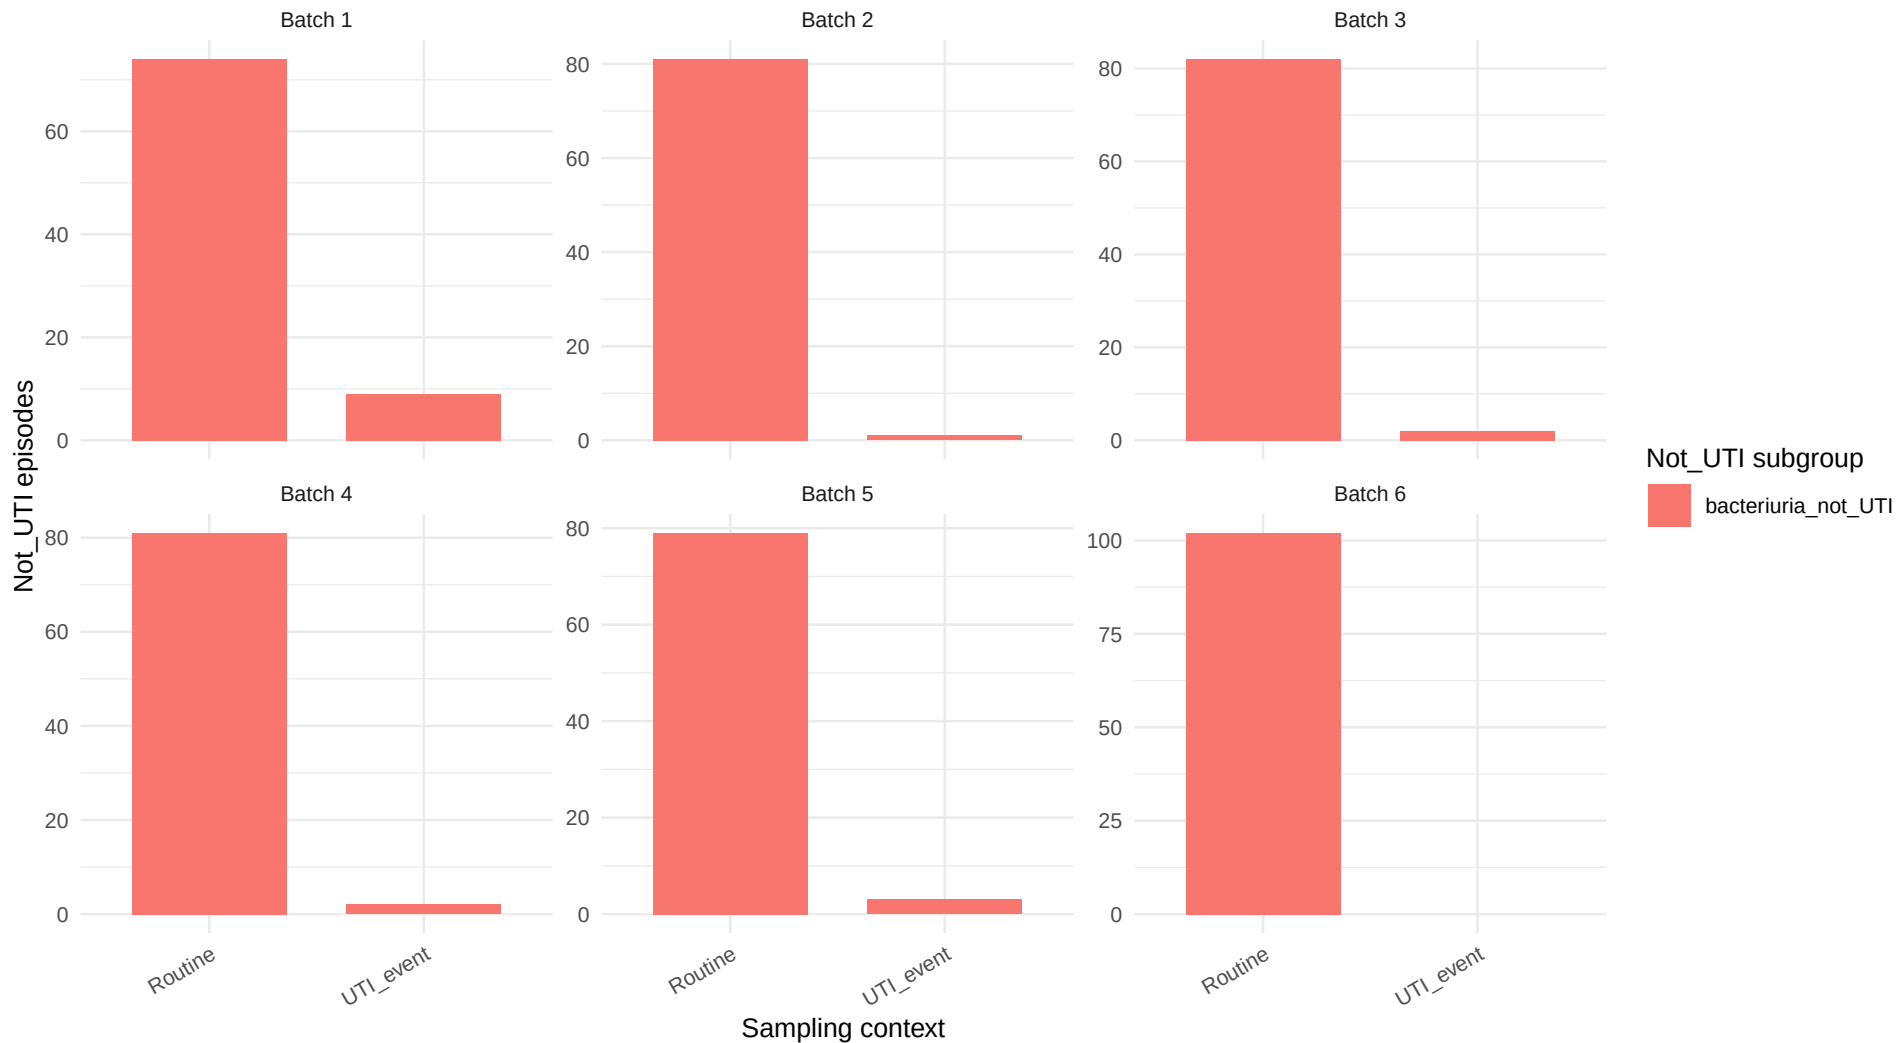

Source clinical status

Episodes

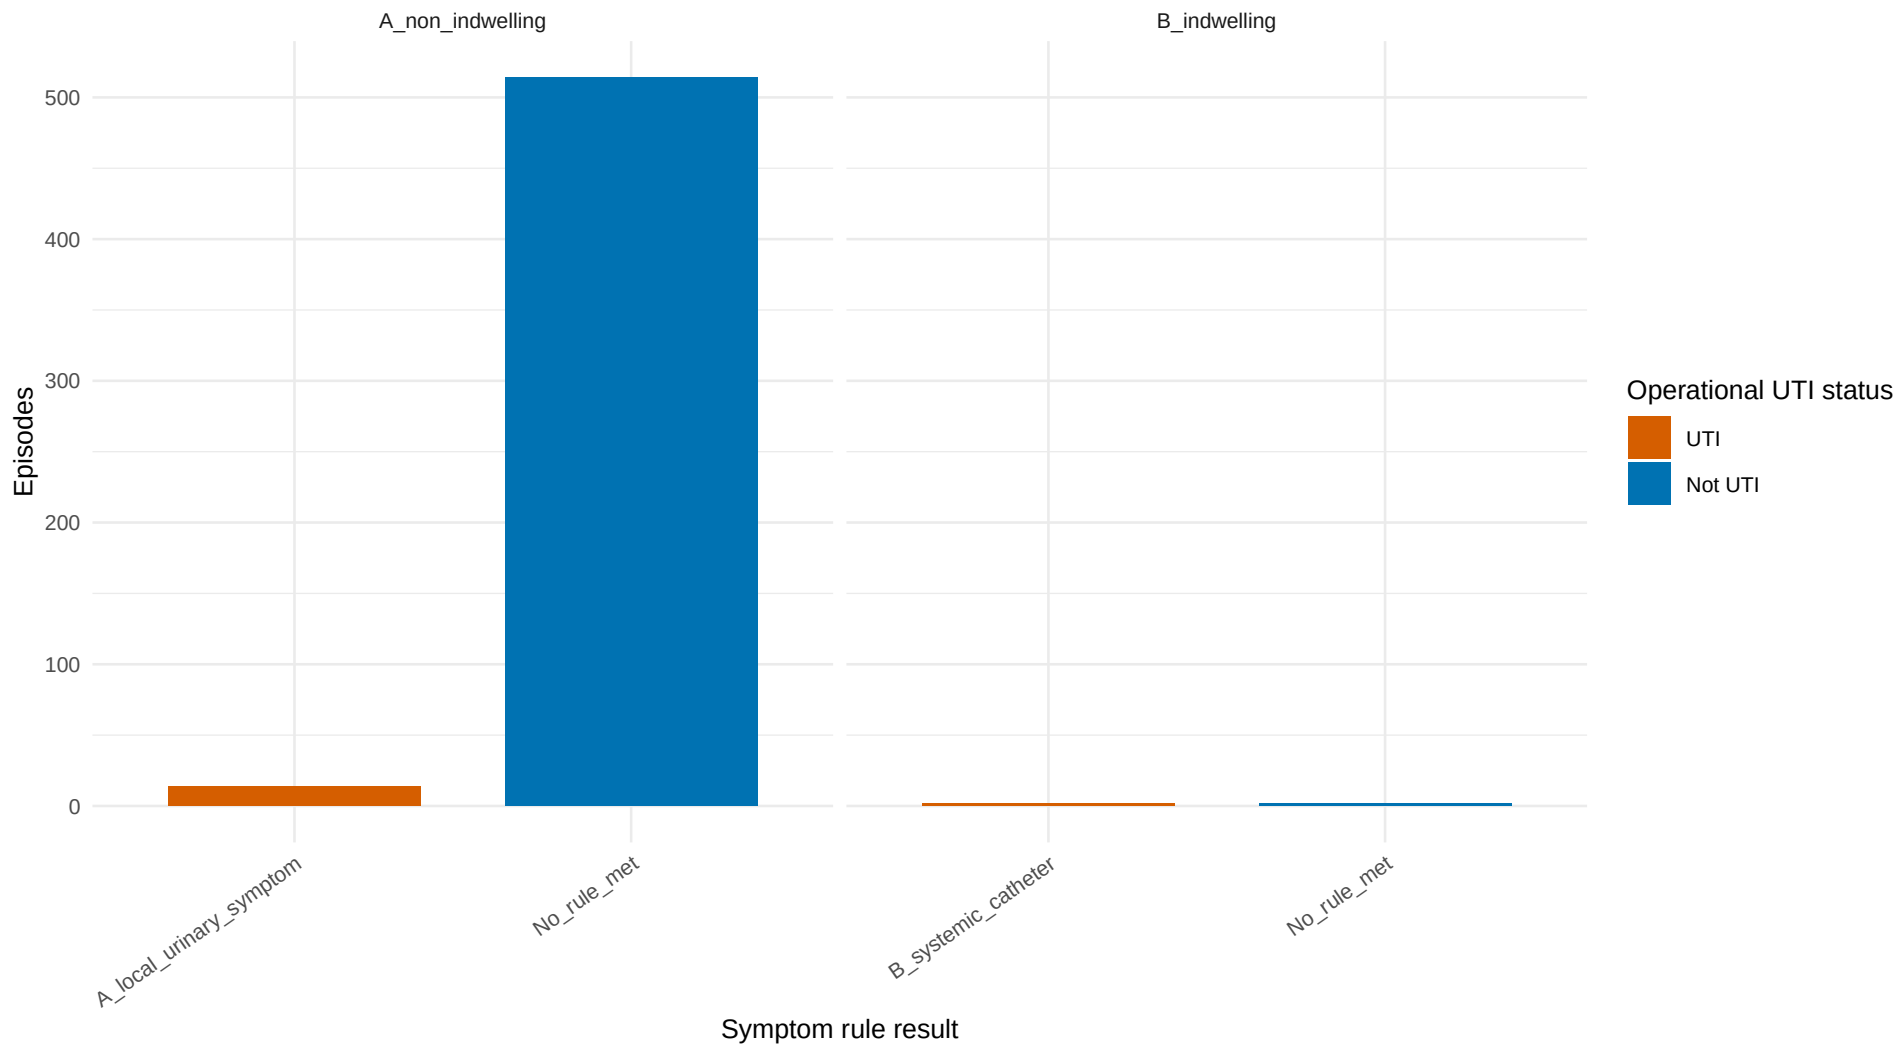

Not_UTI Subgroup Composition

Shows why the primary comparator is heterogeneous

Symptom–Rule Provenance For Primary UTI Classification

Catheter and non–catheter episodes are evaluated under different symptom rules

CFU Threshold Provenance For Primary UTI Classification

Primary culture support uses $\geq 10^3$ CFU/mL or explicit +++ fallback when CFU is missing
